

## AIRWAY TAPE

Airway tapes are disposable tapes used to fix medical devices on the patient's face.

They are used during procedures, to keep the airways open in patients under general anesthesia.

The tape is hypoallergenic adhesive designed, in order to hold firmly to the skin but remove easily without damaging the skin.

### Key features:

- Disposable
- Colorful, ergonomic and non-sticky handles
- Transparent
- Hypoallergenic
- Medical grade material prevents skin irritation
- Silicone coated carrier layer
- Allows the use of different bands for different patients and reduces cross contamination
- Does not harm the skin during removal
- Latex free
